

Technical Program Manager

Job description

CloudSimple is building next generation cloud infrastructure with a specific focus on enterprises workloads. We are looking for a seasoned Technical Program Manager to lead, organize and orchestrate the execution of the various engineering and operations projects and deliverables

Key Responsibilities

- Coordinate and organize mid to long term planning activities for each engineering team, engaging with Product Management for requirements definition, Development and QA for execution tracking
- Plan sprints in coordination with different teams (needs to be technical enough to grasp the work being defined)
- Organize the tasks and efforts in each Sprint in Jira (used for Agile tracking)
- Conduct SCRUM meetings
- Coordinate and lead periodic conference calls with different groups based in US / Ukraine / India
- Follow through and track the sprint progress based on the Jira plans
- Prepare reports and build effective dashboards to keep at the fingertips of the exec team the progress in each area
- Facilitate, organize and track necessary escalations from the engineering team to appropriate technology partners
- Keep track of changes in the product requirements User Stories backlog. Make sure that major release engineering Epics are completely mapped to product User Stories. Coordinate and communicate product requirements changes and updates to engineering teams.
- Overall, be a very self driven person who will "get things done", engaging effectively with each team member to achieve the max productivity in the team. Also be able to work effectively with the execs

Requirements:

- Degree in Computer Science, Business, Electrical Engineering, or related field.
- 5+ years of experience running software engineering and project/program development activities, with a particular emphasis on Agile methodologies.
- Experience program-managing SaaS products and cloud-based services. Solid knowledge in cloud technologies and DevOps practices. Prior experience in a small-medium start-up environment is a strong plus
- Experienced in software development and project/program management essential skills (software development life cycle and quality processes, such as scoping, costs, schedules, deliverables, change and risk management, and mitigation)
- Excellent oral/written communication, interpersonal, and analytical skills. Outstanding organizational, prioritization, and multitasking skills
- Exceptional skills influencing, teaming, and delivering solutions in a highly complex and nebulous environment
- Ability to work on multiple projects concurrently in as fast paced environment

- Strong software engineering technical background with a passion for delivering high performance, quality software.
- Ability to synthesize strategic solutions to interdependent and broad problems
